

MB 4000

General Description

The Technocom MB 4000 is a solid-state, digital audio player used for Music and Message On-Hold applications. The MB 4000 "dual option" delivery provides flexibility in updating the device with new On Hold music and messages.

Users can upload new audio remotely via the Ethernet connection, or on-site by using the removable USB flash drive. For Ethernet applications the audio can be delivered and managed remotely via a LAN/WAN without the need for proprietary software. The USB port can be used as an alternative for those users choosing to update via a removable USB flash drive. Both methods of delivery accept standard MP3 audio files.

The MB 4000 also offers a flexible installation. You can mount the device to a wall next to the phone system, or in a standard 19" server rack environment.

3-Year Limited Warranty (see Technocom website or ask a representative for full details)

Dimensions: 1.75" x 7.375" x 4.25" Rack mount: 1.75" x 19" x 4.25"

Dual Option MP3 On Hold System

Features

Network delivery: The Ethernet connection allows for remote audio upload via the customer Wide Area Network. The MB 4000 has a built-in GUI that allows the user to upload an MP3 file, assign static IP settings and even control level.

USB delivery: If Ethernet delivery is not available, the user can update the audio by means of a removable USB flash drive. Simply drag/drop the MP3 audio files(s) to the flash drive and insert into the MB 4000's rear panel for instant playback. USB flash drive not included.

LCD display: The LCD will display device IP information, volume level, and configuration settings. In USB mode the LCD will display the audio file currently being played. The LCD can also display a customized text "banner" which will continuously scroll across the screen.

Solid-State playback: All audio uploaded via Ethernet connection will play from solid-state 24MB flash memory. Audio uploaded via USB drive will play directly from USB flash drive.

Rack mount (included): For a cleaner installation on VoIP and other rack mount PBxS systems, the MB 4000 can also be mounted on a standard 19" server rack (consumes 1 rack unit).

MP3 compatible: Both the Ethernet and USB flash drive delivery options are compatible with standard MP3 audio files. Recommended bit rate is 64-128 kbps.

Ideal Users

- Multi-location customers
- Perfect for users who need to manage their On Hold content remotely
